

Sainath Gulari

Wilmington, DE - <https://www.linkedin.com/in/sainathgulari> - saigoud1000@gmail.com - 3617205898

Professional Summary

Engineering Leader with 10+ years of experience leading mission-critical fintech systems at scale (55M+ accounts, 10k+ TPS). Specialist in modernizing banking infrastructure to cloud-native and real-time, and AI-ready architectures. Proven track record of orchestrating complex cross-team migrations (20+ teams), driving operational excellence, and coaching and mentoring engineering talent to deliver business value in highly regulated environments.

Experience

Capital One — *Senior Manager, Software Engineering* — July 2026 – Present | Wilmington, DE

- Manage performance calibration and career development for **10+ direct reports**; successfully coached a struggling associate from a Performance Improvement Plan to a promotion.
- Spearheaded the development of **custom Claude AI** capabilities for the team, automating technical support and driving operational efficiency for over 1,000+ internal users.
- Scaled the engineering squad through **strategic recruiting** to align hiring strategy with long-term architectural goals and business roadmaps.
- Facilitate technical design consensus through open dialogue and active listening; actively participate in company-wide mentorship programs to support cross-organizational talent growth.

Capital One — *Manager, Software Engineering* — Aug 2022 – Present | Wilmington, DE

- Lead a squad of 8 engineers managing mission-critical backend systems serving **55M+** retail banking customers at **10k TPS**, fostering a culture of collaboration, innovation, and continuous learning.
- Orchestrated the end-to-end cloud **migration** of production applications from shared to isolated AWS accounts, mitigating systemic security risks while maintaining zero downtime for **10k TPS** services.
- Modernized banking core serving **55M+** retail accounts from batch to **real-time events**, cutting latency by **98%** (3hrs → <3mins) to transform the customer experience.
- Spearheaded a cloud cost optimization initiative, re-architecting ECS and Lambda workloads to achieve **30% monthly AWS** cost savings (\$30k/month).
- Led technical response and post-incident analysis for high-severity incidents, proactively identifying root causes and implementing robust automation (e.g., Automated MQ Retry Handler) to prevent recurrence.
- Partnered with vendors like AWS and New Relic to resolve critical and complex production bottlenecks and validate architectural strategies.

Capital One — *Principal Software Engineer* — Jan 2020 – Aug 2022

- Designed and delivered the Small Business Digital Account Opening platform, modernizing legacy data stores to cloud-native microservices using **Spring Boot** and **NodeJS**.
- Engineered 'CloudWaze' **auto-failover** capability, enabling **one-click** regional disaster recovery (DR) and ensuring **99.99%** availability during regional outages.
- Resolved complex production bottlenecks, utilizing New Relic to debug heap memory leaks and identifying root causes for **SLO** (Service Level Objective) dips.
- Defined resilient Infrastructure-as-Code (**IaC**) patterns to automate complex AWS deployments (ECS, MQ, Batch) across regions.
- Established proactive observability and monitoring standards using **New Relic** and **Splunk**.

Capital One — *Associate Software Engineer* → *Software Engineer* — Mar 2017 – Jan 2020

- Engineered CI/CD pipelines enabling zero-downtime **Blue/Green** deployments for core

microservices.

- Developed cost-optimization tools and **disaster recovery automation** via serverless.
- Built a scalable Java **Kafka-based** audit logging to ensure regulatory compliance and data traceability.

Canopy One Solutions — *Java Developer* — Jan 2016 – Mar 2017 | Wilmington, DE

- Developed automated validation tools (Java Cucumber/Karate) and service health dashboards.
- Wrote and optimized complex SQL queries, views, and stored procedures for relational databases

The Concept Team — *Developer* — Apr 2013 – Dec 2013

- Designed and consumed robust web services, transitioning legacy SOAP/WSDL endpoints to RESTful APIs using JAX-RS/Spring REST.
- Wrote comprehensive unit tests using JUnit and Mockito to ensure code quality and minimize production defects

Certifications

- AWS Certified Security - Specialty | AWS Certified Solutions Architect | AWS Developer Associate
- Anthropic Model Context Protocol | Certified Kubernetes Developer | Secure Software Engineer – DevOps Associate

Education

- M.S., Electrical Engineering — Texas A&M University, Kingsville
- B.Tech, Electronics and Communications Engineering — JNTU Hyderabad

Technologies

Java, Python, NodeJS, Go | Spring Boot, REST | Copilot, Claude, MCP | Docker | AWS ECS, EC2, Lambda, CloudFormation, MQ, Batch, EventBridge, DynamoDB, Route53, ALB, ASG, CloudWatch, Snowflake, Databricks | Kafka, AmazonMQ | Jenkins, NewRelic, Splunk | Angular, HTML/CSS, JavaScript
